Potassium Thiosulfate
Fertilizer
 0-0-25-17S

GUARANTEED ANALYSIS

Soluble Potash (K ₂ O)	25%
Total Sulfur (S)	17%
17% Combined Sulfur Derived from potassium thiosulfate.	
Density: pounds per gallon @ 60°F	12.2
Volume: gallons per ton	164.0

GENERAL INFORMATION

KTS is a neutral to basic, clear liquid solution, containing 25% potash and 17% sulfur. Each gallon of KTS contains 3 pounds of potash (K₂O) and 2.1 pounds of sulfur (S). KTS can be applied by drip, sprinkler or flood irrigation. It may be blended with other fertilizers or applied as a foliar treatment on selected crops. When used as a foliar fertilizer, KTS should first be diluted with water before applying. (See section: **Blending with KTS**) KTS may be applied to a wide variety of ornamental, turf, green-house and other agricultural crops. Potassium requirements for most crops increase dramatically during periods of rapid growth and fruit development.

The purpose of this guide is to provide information about this product and to make suggestions regarding its use. This guide does not make recommendations about the amount of potassium and sulfur needed for optimum crop production. The rate of each application of KTS should be made based on a soil test, soil release rate test and/or plant tissue analysis for potassium and sulfur, and on the recommendations of a Certified Crop Advisor, Pest Control Advisor or authorized KTS distributor.
